How do you reset a rca tablet that won't turn on

Previous Next Sort by votes My rca tablet has been factory reset and rebooted twice and I am still getting the dogs screen flashing on and off every 10-15 plz help A "Factory Reset" usually is set up to keep your data. If that is the one you did, then it may have failed if there was any software issue. The only options left would be a "Hard Reset", which will wipe all data and reset the device, or it could be a hardware issue, which then you would need a tech to look at. NOTE: Doing this will clear 'all' the data on your tablet, so it is suggested you not choose this option unless you have to, or aren't worried about losing anything on the device. Be sure you back up any data you want to keep, to a computer or cloud account, before doing the reset. To "Hard Reset" the tablet... 1. Make sure that the tablet is actually powered off. 2. Remove your SD card, if there is one in the device. 3. Press the "Power" and the "Volume Up" buttons, together, until you see the start-up logo on the screen. 4. Once you can see the logo, release the buttons and allow the device to enter the "System Recovery Mode". 5. Next use "Volume Down" button to get to the "wipe data/factory reset" option When in recovery mode the "Volume Up" and "Volume Down" buttons are how to can navigate and highlight what option you need. 6. Once you have selected the "wipe data/factory reset", press the "Power" button to select that option. 7. On the following screen, repeatedly press the "Volume Down" button until the "Yes - delete all user data" option is what is selected. 8. Then press the "Power" button to hard reset the tablet. 9. If you took your SD card out in step 2, when the device is up and running again, reinsert the SD card. A "Factory Reset" usually is set up to keep your data. Unless your device has gone through major physical damages, you don't need to take it to a shop for repair. A lot of minor issues can be solved with a simple reset. Most people don't know this and hence, don't even try. You can follow these few easy steps and learn how to reset your RCA tablet at home. Before You Start Firstly, all glitches don't require a reset. If the screen is not responding or the tab froze suddenly, what you need to know is how to reboot an RCA tablet in such a situation. Unlike most other tablets, RCA tablets come with a reset button at the back. The button is deep-set, so you may need a pin or paper clip to press it. Just long-press the reset button and your device will restart. However, if you are facing any of the following issues like, Slow performance or apps getting hung,Forgot your password,Or other glitches that are not fixed with a reboot, Then you need to know how to factory reset RCA tablet, which is exactly what we have for you here. If you are not facing any technical issues and your tablet is working, you can factory reset it from Settings. This method can be used if you just want to erase your personal data or restore your device to default settings. Step 1 Unlock your device and open Settings. Step 2 Scroll down and you will find an option that says 'backup and reset'. Tap on that and you will see a confirmation page that will tell you what happens once you confirm. It is recommended that you read this if you are unsure of what a factory reset will do to your device. Alternatively, if you cannot find the 'backup and reset' option directly in Settings, it may be in a separate section. Go to Settings and then tap on Privacy. Here you will find the 'backup and reset' or 'factory reset' option. Step 3 You will see a button that says 'reset tablet' or 'factory data reset'. Select that and let your device complete the process. The reset is not completed until you restart the device. Some devices restart on their own, but if yours does not, you will have to restart it manually and your factory reset will be complete. Use this method if you cannot unlock or turn on the tablet. For example, if you forgot your password. The steps for factory reset are similar but vary slightly for Android and Windows devices. We have covered both for your convenience. Windows The most common RCA tab that runs on Windows is the Cambio 10.1. Most Windows tablets come with a keyboard. So, here is how to factory reset RCA tablet with keyboard, which can also be used to reset any RCA Windows tab. Step 1 Completely switch off the device (if it isn't off already). Step 2 Turn it on again and while it is loading, press and hold the "fn" (function) button and repeatedly press F9 on your keyboard. Keep pressing until you see "Please wait" appear on the screen. Release the function button once it appears. Step 3 Wait a few seconds and select the 'Troubleshoot' option. Then select 'Reset your PC'. Next, you can either choose to just 'remove files' or 'clean the drive' completely (this will erase all your data and reset your tab to its default settings). Make your selection and you will see the RCA logo appear as well as the 'loading' animation. Leave your device aside and let it proceed on its own. Depending on your system setting, amount of data, etc. this process may take anywhere from 30 to 60 minutes. The device may turn on and off on its own during this, so do not manually press any buttons. Once the process is complete, your tablet will restart with its original factory settings. For Windows tablets, if any software or applications do not seem to work properly after reset, run the Windows update. This should fix the problem. Completely switch off the device (if it isn't off already). Step 2 Press and hold the Power button and the Volume Up at the same time. Once you see the start screen with the RCA logo, release the buttons. For some tablets, you may have to go with the following alternate step: Press and hold the Power button and Volume Up button at the same time. Now hold on to the Volume Up button and keep pressing the Power button a few times until you see the start screen. Step 3 You will see a command prompt screen with blue and yellow/orange text with the Android logo. Use the Volume Up and Down buttons to navigate and move to 'wipe data/ factory reset'. Use the Power button to select the option. You will see a confirmation page. Navigate the same way and select 'yes - delete all user data'. Select the Power button. Once the data is erased, you will be redirected to the command prompt screen. Next, select 'reboot system now', and let your device do the rest. How long it will take for the data to be erased depends on the amount you have stored. Your device will restart and ask you to select your language, just like when you first turn on a new device. You can use this method for both RCA Viking Pro as well as to factory reset your RCA voyager tablet. Using factory reset means you will lose your data. Unless this was your motive for resetting the device, make sure to backup. If you back it up properly or have a habit of using cloud storage, you have nothing to worry about. A factory reset can solve a lot of technical issues, but of course, it does not repair physical damages. Next time your device gets stuck, try this. I hope this guide was helpful.
